DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: With regard to claims 1-12, the instant invention is deemed to be a non-obvious improvement over the inventions described in US Patents 6,681,797 B2; 6,010,740; 5,152,841; and 4,922,852. These prior inventions, along with the admitted prior art of pages 1 and 2 of the specification, disclose spray coating devices comprising liquid spray guns, a liquid feed valve fitted with a liquid valve seat and a liquid valve element that is displaceable relative to the seat between a closed and an open liquid valve position. These prior inventions further disclose measuring valve devices of a variety designs, including electromagnetic devices (admitted prior art), pressure transducers measuring the liquid spray (US 6,681,797 B2, item 8), solenoids and proximity sensors (US 6,010,740 - item 220), proximity switches (US 5,152,841 - item 1) and strain gauge pressure transducers (US 4,922,852 - item 36). However, the prior art of record does not disclose or make obvious a measuring valve device that is configured in a compressed gas measuring valve flow path and is ganged to the liquid valve element to implement joint displacement with it so as to be driven by said element, the measuring valve device being designed in such a way that, depending on the positions of the liquid valve element, it shall assume a closed position sealing off the compressed gas measuring valve flow path when the liquid feed valve assumes its fully closed position and when it assumes its fully open position, but shall always be in an open position keeping open

the compressed gas measuring valve flow path when the liquid valve element assumes an arbitrary intermediate position between its fully open and its fully closed liquid valve positions, whereby, and depending on compressed gas flowing or not through the measuring valve, it may be automatically determined whether the liquid valve element assumes one of the positions, namely open or closed liquid valve positions, or an arbitrary intermediate position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
